Professional Summary

Aspiring Data Analyst with hands-on experience in Python-based data analysis and machine learning projects. Skilled in data cleaning, exploratory data analysis (EDA), data preprocessing, statistical analysis, and data visualization using Pandas, NumPy, Matplotlib, and Scikit-learn. Familiar with SQL, relational databases, and data-driven problem-solving. Interested in transforming raw data into meaningful insights to support business decisions.

Education

Bachelor of Technology (B.Tech) 2021 – 2025
Oriental University, Indore CGPA: 8.0/10

Technical Skills

Languages	Python
Data Analysis	Pandas, NumPy, Data Cleaning, Data Preprocessing, Exploratory Data Analysis (EDA)
Visualization	Matplotlib, Data Visualization, Charts and Graphs
SQL & DB	SQL Queries, PostgreSQL, Data Filtering, Joins, Aggregations
ML	Scikit-learn, Feature Scaling, Model Evaluation, Classification Basics
Tools	Jupyter Notebook, Git, GitHub, VS Code, Postman
Core Concepts	DBMS, OOP, Data Structures and Algorithms, Problem-Solving

Experience

Python Developer Intern Sep 2023 – Nov 2023
Insignia Consultancy, Indore GitHub Certificate

- Worked on a Django-based Learning Management System involving course management, user authentication, enrollment, and progress tracking.
- Integrated PostgreSQL with Django to store and manage application data.
- Developed backend functionality and responsive interfaces using Django templates, HTML, CSS, and JavaScript.
- Gained practical experience in database operations, application workflows, debugging, and structured data management.

Python Developer Trainee Apr 2023 – May 2023
HCL Tech – Online Training GitHub Certificate

- Practiced Python programming and application logic through hands-on training exercises.
- Developed EquipMaster, an equipment maintenance and scheduling application using Django and PostgreSQL.
- Implemented role-based access for administrators, managers, and technicians.
- Worked with database records, maintenance schedules, and dashboard reporting functionality.

Projects

Customer Churn Analysis GitHub
Python, Pandas, NumPy, Data Analysis

- Analyzed customer churn data to explore customer behavior and identify patterns associated with customer retention and churn.
- Applied data cleaning, preprocessing, and exploratory data analysis to understand dataset characteristics and identify data quality issues.
- Examined customer segments and relationships between relevant features to support data-driven interpretation of churn patterns.
- Used Python data analysis libraries to organize, analyze, and visualize data for deriving meaningful business insights.

Heart Disease Prediction GitHub
Python, Pandas, NumPy, Scikit-learn, KNN, Joblib, Streamlit

- Developed a machine learning application to predict the likelihood of heart disease using patient health-related features.
- Performed exploratory data analysis, data preprocessing, categorical encoding, feature scaling, and train-test splitting.
- Compared classification algorithms including Logistic Regression, KNN, Naive Bayes, Decision Tree, and SVM using evaluation metrics.
- Saved the selected KNN model and preprocessing components using Joblib and integrated them into an interactive Streamlit application.
